## Welcome to Android vitals

Android vitals is a program designed to help developers understand and analyze Android app performance. First, take a look at the video above and then get started with the links below. [Learn more](#)

Google doesn't yet have enough data to surface Android vitals for your app. This may be for one or more of the following reasons:

- Google can't provide data for your combination of device and platform version.
- Not enough users have opted in on currently supported devices.
- Your app doesn't use features, such as wake locks or wakeups, that Android vitals tracks.

Sorry, this data is not available.
